

CASE STUDY

PROTECTING A D365 FINANCE & OPERATIONS TRANSFORMATION

THE CHALLENGE

A global B2B organisation was delivering a large-scale D365 Finance & Operations transformation, migrating a heavily customised Dynamics AX environment across 47 legal entities. As the programme entered a critical stabilisation phase, senior ERP talent was urgently required. In an already scarce market, the inability to mobilise experienced architects quickly posed a direct risk to delivery timelines, system stability, and stakeholder confidence.

THE DIGISOURCED APPROACH

Digisourced was engaged as a programme-protection partner to the systems integrator. Rather than running a traditional recruitment process, the focus was on rapid access to a specialised international ERP network, deep qualification, and immediate availability of senior Dynamics AX and D365FO architects with proven enterprise delivery experience.

DELIVERY

Parallel market mapping was conducted across the EU to identify both functional and technical architects. Within 24 hours, a highly relevant shortlist was delivered.

Contracts were agreed within days, and both architects were onsite in Stuttgart within a week, embedded into a critical phase of the programme.

OUTCOME

The immediate mobilisation of senior capability protected programme momentum, enabled ownership across complex finance, supply chain, and integration workstreams, and reduced exposure to delivery delays, operational disruption, and technical risk.

RESULT

Digisourced successfully safeguarded a high-stakes ERP transformation by embedding senior D365FO expertise exactly when it was needed. The engagement demonstrated Digisourced's ability to operate at programme speed in scarce talent markets where timelines are fixed and delivery risk is high.
